Summary

Some of my client-based business projects are showcased in my portfolio at zabeer.dev. In my resume, I have highlighted my programming experience through hobby projects and other ongoing development work.

Experience

Backend Developer, Scaleup Ads Agency

December 2024 to Present

Mohakhali, Dhaka

Here, my primary role involves developing APIs with **Node Express** or **Laravel** for frontend and mobile app developers. Additionally, I've contributed to WordPress development by working on **Wordpress custom plugins**.

Backend Developer, Unified Core LTD

July 2023 - December 2024

Eskaton, Dhaka

I have experience working on a Human Resource (HR) management system and a SaaS-based eCommerce platform, where I contributed to building scalable features, improving performance, and ensuring a smooth user experience.

Skills

Languages: JavaScript, PHP

Problem Solving: Leet Code: 35, code force : 40

Frameworks: Laravel(2 years), Node Express, Next JS.

Database: SQL like databases, Mongodb (mongoose).

Server: Hpanel (CI/CD deployment), Cpanel.

Business Applications: Ecommerce(SaaS Based), Hr system, Movie App (AWS S3), Socket.io.

Projects

Ecommerce Microservice (Multivendor) :

this is my first project with micro-service. I am learning Node and express. Building apis in node express. where DataBase is MONGODB and Laravel Database in Mysql. So, here is 2 Databases and 2 applications. Implemented File based caching system in express.

GITHUB: https://github.com/zabeer001/ecommerce_microservice_multi_vendor

Live , Api documentations are in readme

Services:

1. Node.js, Express, MongoDB, Mongoose:

- ☐ Chat system and notifications using Socket.IO
- ☐ Authentication with JWT, category and product management

2. Laravel:

- ☐ Order and payment management

3. Observations:

- ☐ Node.js's event-driven, single-threaded architecture enables efficient handling of concurrent connections.
- ☐ While Pusher.js is popular for real-time features in Laravel, Socket.IO is more cost-efficient for AWS deployments.
- ☐ Laravel's scaffolding makes CRUD operations faster compared to Express.
- ☐ Using a single service class per controller method in Laravel increases development time but enhances code organization.

Progress

NODE EXPRESS:

Authentication (login with google) | category | Product with multiple images in clouinary | promocode | Order Product SQL like Pivot Relation in mongoose | payment system (stripe) | filtering and searching included | Email notification | file based Caching system | login with google | Socket (Chat & Broadcasting).

LARAVEL:

project Intialized | order will be done in laravel then kafka will be used.

DEVOPS:

Gaining experience with Ubuntu, DevOps, Bash scripting for AWS deployment and monitoring.
